

HTNG Property Web Services Workgroup Back-Office Integration Team

Charter & Objectives

The purpose of this team is to develop the specification of a generic interface between the various hotel revenue capturing-systems such as PMS, POS, spa, golf, and sales/catering on the one hand, and financial accounting systems on the other.

Business Benefits

- Provision of a standard specification, implementation guidelines, and mapping guidelines for integrating hotel revenue-capturing systems to financial accounting (back office) systems, enabling out-of-the-box integration between front office and back office systems
- Expanded data visibility and transaction detail for the various hotel revenue capturing systems
- A robust, secure, and standardized interface that supports corporate governance efforts

Past & Planned Deliverables

- Completed integration overview working document
- Delivered completed message specification, subject to live implementation testing
- First live implementations under development early 2008
